1. INTRODUCTION

An instance of the TAQ OpenBook Ultra file and of the TAQ OpenBook Aggregated file is produced at the end of every trading day for the NYSE exchange, and for the NYSE American exchange, a total of four files.

Each record in the file represents an update to the state of the order book for a particular symbol traded at the exchange. The order books for all symbols traded on the exchange are included. Test symbols are not included.

For OpenBook Ultra, and update record appears whenever there was a significant change to the order book. For Openbook Aggregated, update records are published once a second per symbol.

Records are in chronological order.
