### **Engineering Services Disclaimer**

Information contained in this document is believed to be accurate. However NYSE does not guarantee the completeness or accuracy of any of the published information. This work is published with the understanding that NYSE is supplying information, but not attempting to render engineering or other professional services. If such services are required the assistance of the appropriate professional should be sought.

### **NYSE DISCLAIMER**

Your use of this document in any way is subject to your compliance with all conditions of such use, and your acceptance of all disclaimers and limitations as to such use, contained in this paragraph and elsewhere in this document. This document is intended only as a technical guide for use of the FIX Protocol with the NYSE.

The information contained in this document is subject to change without notice. To submit any comments or questions, or to receive the latest version of the document, please contact the NYSE.

NYSE reserves the right to require customers wishing to gain access to NYSE services through the Common Access Point to first manifest assent, either electronically or in writing (as NYSE may specify), to an agreement. Among other things, that agreement will extend to non-members gaining access to NYSE services and the Common Access Point the same disclaimers and limitations of liability that the NYSE Constitution currently affords to NYSE and its agents in respect of the claims of NYSE members.

NYSE PROVIDES THE COMMON ACCESS POINT SERVICE ON AN “AS IS” BASIS. NYSE AND NYSE’S OTHER AGENTS AND THEIR RESPECTIVE DIRECTORS, OFFICERS, PARTNERS AND EMPLOYEES DISCLAIM ALL WARRANTIES RELATING TO THE COMMON ACCESS POINT SERVICE, EXPRESSED OR IMPLIED, INCLUDING ANY WARRANTIES THAT MAY ARISE FROM TRADE USAGE, COURSE OF DEALING OR THE IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALTHOUGH INFORMATION CONTAINED IN THIS DOCUMENT IS BELIEVED TO BE ACCURATE, THOSE PARTIES DO NOT GUARANTEE THE COMPLETENESS OR ACCURACY OF ANY SUCH INFORMATION AND THEY WILL NOT ACCEPT LIABILITY FOR INDIRECT OR CONSEQUENTIAL DAMAGES OR FOR DAMAGES RESULTING FROM THEIR NEGLIGENCE.

NYSE, in its discretion, may diminish, enhance, change, eliminate, determine periods of availability and restrictions on use of, and determine the persons or entities authorized to have access to, the Common Access Point and any system or service available through the use of the Common Access Point.

Nothing in this document constitutes an attempt to render legal, engineering, or other professional services or advice. Any user of this document is advised to seek appropriate legal, engineering or other professional advice regarding the use, interpretation or effect of this document on any matters discussed in this document.

## Revision History

| Date      | Revision | Synopsis of Change   |

# 1. Overview

## 1.1 Binary Common Customer Gateway

NYSE Binary CCG is the Common Customer Gateway application that is designed to be the strategic entry point for any user planning to transact business with NYSE Equities using UTPDirect protocol. For Binary CCG production questions, please contact the Connectivity Team by [e-mail](#) or (212) 896-2830 Option 2, Sub-Option 1. For UAT test environment questions, please contact NYSE Member Services by [e-mail](#) or (212) 896-2830 Option 2, Sub-Option 2.

As new services or features are added to Binary CCG or the Matching Engine, the NYSE sends out Trader Update emails informing you of these upcoming changes. If you wish to receive these updates, also posted [here](#) on the NYSE website, please contact your NYSE Relationship Manager or [subscribe directly](#).

## 1.2 UTP Direct

UTPDirect is a message-based interface to send order flow to NYSE. The protocol is designed to reduce bandwidth and latency with smaller messages that are easier to parse. The protocol uses fixed length messages over TCP/IP. The contents of fields are binary and fixed length ASCII values where binary values are in network Endian (Big Endian) format. UTPDirect Session behavior, Field names, and Field contents were designed to match the standard FIX behavior as closely as possible. The UTPDirect protocol uses many terms to match our existing FIX protocol. It is not FIX compliant, but to reduce confusion between FIX implementation and UTPDirect implementation we use many FIX terms. The message types are talked about as their FIX equivalents where possible. The field names are referred to with FIX names.

This API includes the concept of message variants to enable new messages with new fields to be added for use without requiring all clients to upgrade at the same time. As an example, the new order message will have several variants to support a variety of user's needs. Simple Limit orders can be handled in smaller messages that don't include all the fields required for full functionality such as special order types like Reserve orders. The full suite of NYSE order types is accessible with these different variants, some of which require more fields and are larger in size.

Customers may establish one or more new Binary CCG connections, separate from any existing CCG FIX connections. Firms who wish to receive drop copy for UTPDirect protocol messages will be provided with a new set of FIX drop copy connections. Drop copy messages will be sent out in existing [FIX message format](#). Routing directly to a Booth or Broker Badge is not supported in the initial implementation of Binary CCG but will be supported in a future phase.

## 1.3 UTPDirect API Certification

Testing for UTPDirect is currently manual. Each firm must certify its applications with NYSE prior to implementation. To schedule a test, please contact NYSE Member Services by [e-mail](#) or (212) 896 - 2830 Option 2, Sub-Option 2.

### **Other Contacts**

The NYSE Market Support teams have a centralized phone number: +1 212-896-2830. Through this number, clients are able to reach all support contacts for Trading, Technical, Market Data and Client Relationship Services. Below are the options to quickly get you to the most appropriate team.

+1 212-896-2830

Option 1 - Trading Support

- Sub-Option 1 - NYSE/NYSE American Equities
- Sub-Option 2 - NYSE ARCA Equities / NYSE Bonds
- Sub-Option 3 - NYSE Options

Option 2 - API Connectivity/Order Routing Support

- Sub-Option 1 - Production support
- Sub-Option 2 - UAT support

Option 3 - SFTI Network Operations and Colocation Support

Option 4 - Market Data Support

Option 5 - Client Relationship Services

Option 6 - Other technical support inquiries

## 1.4 Future Enhancements

Future enhancements and/or modifications may require system changes for your firm. Please refer to the NYSE webpages at <https://www.nyse.com/markets/nyse/notices> and <https://www.nyse.com/markets/nyse/market-info> to obtain the latest Technology Member Firm Notifications and specification documents.

To automatically receive these notifications by email, register [here](#), or contact your NYSE Relationship Manager.

## 2. System Architecture

Each client connects and sends messages to its assigned Binary CCG session using the configured IP and port. The Binary CCG gateway then routes the messages received to the appropriate Matching Engine. At present, Binary CCG supports only routing to the NYSE Matching Engine. Routing to the Broker systems and NYSE Arca will be supported in a future phase. The following diagram represents the high-level overview of the systems in support of the NYSE market.

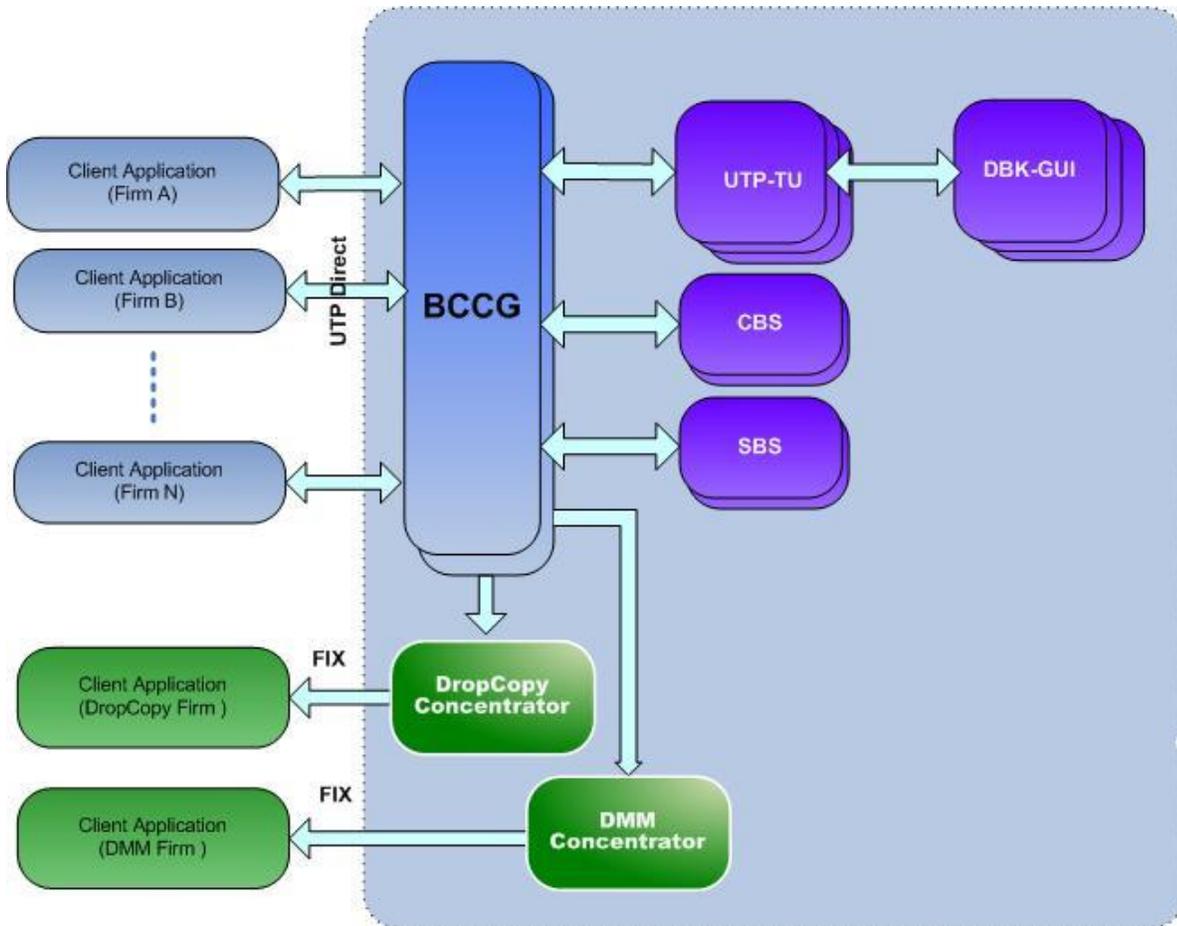

Figure 1: NYSE - Binary CCG Architecture

| Legend       |                                       |
|--------------|---------------------------------------|
| Abbreviation | Full Name                             |
| Binary CCG   | Binary Common Customer Gateway        |
| DBK GUI      | Display Book Graphical User Interface |
| UTP          | Universal Trading Platform Trading    |

### 3. NYSE Pillar Trading Platform for Tape B&C Symbols

As of April 2018, four NYSE Group equities markets are trading on NYSE Pillar, our new integrated trading technology platform - including Tape B&C securities on NYSE. Phase V of the rollout will consist of migrating Tape A securities to NYSE Pillar matching engines. During this phase, customers will continue to connect to the existing NYSE CCG/Binary CCG (UTP Direct) gateways and use existing messaging protocols.

However, there are changes to certain order types and messaging that will go into effect on a symbol-by-symbol basis, as the NYSE Pillar matching engines are deployed. With regard to gateway messaging, the associated changes to FIX tags and values are indicated with notes throughout this gateway specification where applicable.

Please note that NYSE Pillar will enforce stricter validation of FIX tags rather than ignore them. Therefore, orders for symbols migrated to NYSE Pillar may not contain any FIX tags which are not outlined in this gateway specification. Such orders carrying unsupported FIX tags will be rejected.

For information on the functional changes to various order types that will take effect for symbols migrated to NYSE Pillar, please visit: <https://www.nyse.com/pillar>.

## 4. NYSE Equities Specific Information

### 4.1 Hours of Operation

For all symbols Tape A/B/C, NYSE accepts and acknowledges orders starting at 6:30 AM Eastern Time.

For Tape A Symbols:

- Opening Auctions – beginning 9:30 AM ET
- Core Trading Session – 9:30 AM – 4:00 PM ET
- Closing Auctions – beginning 4:00 PM ET

For Tape B&C Symbols:

- Local auctions are not conducted
- Early Trading Session – 7:00 AM – 9:30 AM ET
- Core Trading Session – 9:30 AM – 4:00 PM ET
- **IMPORTANT- Trading Session Eligibility:** this gateway does not support designation of trading session eligibility on orders. Instead, Pillar defaults trading session designation based on order type. Orders go live and are eligible to execute based on these defaults. Firms are responsible for managing their execution risk around the defaults.

For a list of order types with their default trading session designations, see the document [Functional Differences between NYSE Group Equities Platforms](#).

### 4.2 NYSE Symbology

Orders for instruments with suffixes (different classes of stock, preferred stock, etc.) can be sent in the message in the Symbol field with symbol and suffix separated by a space (e.g., "BRK A"). For a detailed list of the suffixes, please refer to Appendix D.

### 4.3 Opening and Closing Auction Orders

NYSE offers both opening and closing auctions for **NYSE-Listed Symbols only**. The schedule for these auctions is listed below.

- **Opening Auction** - 9:30 AM EST
- **Closing Auction** - 4:00 PM EST

#### **Opening Orders**

To place an order for the opening auction specify `TimeInForce = 2` (OPG - at the opening).

1. **Market on Open:**

Orders must be submitted before the specified securities Opening Trade (typically, **9:30am** EST) and the new order message **MUST** contain the following fields populated in order to be included in the Opening Auction:

`OrdType = 1` (Market)

`TimeInForce = 2` (OPG)

2. **Limit on Open:**

Orders must be submitted before the specified securities Opening Trade (typically, **9:30am** EST) and the new order message **MUST** contain the following fields populated in order to be included in the Opening Auction:

`OrdType = 2` (Limit)

`TimeInForce = 2` (OPG)

#### **Closing Orders**

The NYSE supports three Closing Auction order types.

1. **Market on Close (MOC)**

To place a Market on Close order for the closing auction, orders must be received before 3:50pm EST (unless the order is taking the opposite side of a published Regulatory imbalance). Any cancel received after 3:58 p.m. on a MOC order will be rejected.

Please note: NYSE systems will reject all cancel, partial cancel & cancel replace requests sent after 3:58pm for any MOC and LOC order, including orders that were entered to offset a published imbalance. Cancel requests (full, partial or cancel/replacements) sent between 3:50pm and 3:58pm will be accepted to correct a legitimate error.

To designate a new order message as Market on Close (MOC), the order **MUST** contain the following fields:

`OrdType = 5` (Market on Close)

`TimeInForce = 0`

2. **Limit on Close (LOC)**

To place a Limit on Close order for the closing auction, orders must be received before 3:50pm EST (unless the order is taking the opposite side of a published Regulatory imbalance). Any cancel received after 3:58 p.m. on a LOC order will be rejected.

Please note: NYSE systems will reject all cancel, partial cancel & cancel replace requests sent after 3:58pm for any MOC and LOC order, including orders that were entered to offset a published imbalance. Cancel requests (full, partial or cancel/replacements) sent between 3:50pm and 3:58pm will be accepted to correct a legitimate error.

To designate a new order message as LOC, the order **MUST** contain the following fields:

OrdType = B (Limit on Close)

TimeInForce = 0

### 3. Closing Offset Orders (CO) \*\*For symbols migrated to Pillar – available for Tape A securities only

The Closing Offset order is a day limit order to buy or sell and will be accepted up until 4:00 p.m., regardless of any imbalance or side of imbalance. CO orders provide liquidity to offset imbalances at the Close and execute at the closing price. CO orders will trade if marketable to fill any remaining imbalance and will yield to **all** other interest, except at-price “G” interest. Within the CO allocation, CO orders will be filled in time priority. CO orders on the same side of the imbalance will not participate.

To designate a new order message as Closing Offset (CO), the order **MUST** contain the following fields:

RoutingInstruction = C (Closing Offset)

## 4.4 Drop Copy Application

NYSE provides a service whereby firms can receive copies of Orders, Reports, ERCs, Cancels, Cancel Replaces, UR OUTs and/or Replaced messages for a given firm mnemonic. Drop Copy processing allows for the distribution of multiple drop copies by an Entering Firm. Entering firm mnemonic owners must subscribe via the current process of contacting Broker Services. Once subscribed, additional drop copy connections can be established so that more than one copy can be generated. The maximum is currently four and the default set up for all additional drop copy connections is reports only. Each individual supplemental connection is given the ability to subscribe to the mix of messages they wish to receive. Filter criteria (orders, reports and/or admin messages) will remain and message acknowledgements will not be included for drop copy processing.

The number of connections per recipient is determined by the traffic the customer wishes to receive. For example, if CCG traffic only, the customer is required to establish a connection to each CCG Drop Copy Concentrator (currently 4). If BCCG traffic only, the customer is required to establish a connection to each BCCG Drop Copy Concentrator (currently 2). If a customer wishes to receive both CCG and BCCG message drop copies, the customer is required to connect into all 6 drop copy concentrators.

The drop copy messages will be sent out on this new connection in existing FIX message format. Please note there may be differences in the tags received for the drop copied messages in the UTP Direct path compared to the fields received for drop copied messages in the FIX message protocol path (e.g. decimal is truncated from order and cancel/replacement drop copies if non-significant digits). Additional drop copy sessions may be required depending on the number of firm connections requested and the volume of traffic in the UTP Direct connections.

To request Drop Copy sessions, please contact the Connectivity Team by [e-mail](#) or (212) 896-2830 Option 2, Sub-Option 1. To request that a mnemonic be enabled for drop copy service, the owner of the mnemonic should contact Broker Services by [e-mail](#) or 212-656-5438.

## 4.5 Done For Day Subscription Service

A subscription based service for NYSE that immediately returns an unsolicited “UROUT” message for all open “Day” orders as each individual security’s closing trade is processed. For securities that do not have a closing transaction, an

unsolicited “UROUT” message will be returned at the designated 4:45 p.m. cutoff time. InformationCode field will contain a value of ‘3’. Firms interested in testing this new service can contact NYSE Member Services by [e-mail](#) or (212) 896-2830 Option 2, Sub-Option 2.

\*\*For symbols migrated to Pillar – Regardless of whether firms are subscribed to receive them or not, Done for Day messages are automatically sent for all open orders at the conclusion of the Core Trading Session.

## 4.6 Cancel on Disconnect Service

A session can be configured to automatically cancel all open day orders if the firm’s session disconnects from BCCG. Firms can control this feature by way of the CancelOnDisconnect flag in the inbound logon message to BCCG. The optional auto cancel upon disconnect service will only cancel open market or limit orders with a time-in-force of “Day”. Any Market “At the Close” or Limit “At the Close” (MOC/LOC) or Closing Offset (CO) orders will not be canceled as part of this service.

For the purposes of this optional service, the NYSE will use the following criteria to initiate the auto-cancel service:

- a) Loss of the physical or network connection to CCG detected; or
- b) Failure to receive heartbeats within the specified heartbeat interval on an inactive session.

However, the NYSE will not initiate the auto-cancel service due to an internal NYSE CCG server outage or failure.

Members and member organizations should note that NYSE is providing this optional service as an alternative to the present manual process. Executions may occur at or about the same time that a firm experiences a disconnect, and before the auto cancel feature completes cancelation of open day orders. If this should occur, all executions occurring prior to the activation of the auto cancel feature will be valid, and any resulting execution reports will be returned to the firm along with any “UR Outs” upon re-establishing the UTP Direct connection.

### **NYSE Pillar Risk Mitigation**

In the event a matching engine enters an unexpected state, the Pillar Risk Mitigation process will be triggered. Gateway users will receive unsolicited cancels on all live orders on the impacted matching engine, including MOO, LOO, MOC, LOC, with a reason code ‘168 – Pillar Risk Mitigation’. The impacted matching engine will initiate an automatic recovery during which period new orders will be rejected with a reason code ‘76 – System not available’. Once the resumption is complete, users will need to resubmit MOO, LOO, MOC, and LOC orders.

## 4.7 Retail Orders

\*\*For symbols migrated to Pillar – Retail Price Improvement and Retail Only Limit orders supported (available beginning on a date announced via Trader Update). Retail Only Market Order, Retail Non-Routable Order, and Retail Routable Order are rejected.

The NYSE has established a Retail Liquidity Program for customers. Binary customers wishing to take advantage of this order type must use the D.2 Order message, G.2 Order Cancel/Replace message variant or later versions, to route Retail Price Improvement (RPI) Orders or Retail Taker orders to the NYSE Matching engine using new designated values in the Routing Instruction field.

Retail Price Improvement Orders provide potential price improvement to incoming order flow in the form of non-displayed interest that is better than the protected best bid/offer. RPI orders designates a minimum amount of price improvement by populating a new ‘Offset Price’ field in the new order message, and are designed to only execute with Retail Taker orders. The limit price and offset price must be submitted in multiples of the minimum price improvement value, currently set at \$0.0010. In addition, any RPI interest that would result in an execution below \$1.00 will be prevented from trading.

Retail Taker orders, which are treated as IOC interest, are available in 3 varieties:

- Retail Only orders only interact with RPI Orders

- Retail Non-Routable orders may interact with RPI interest and/or other interest on the Limit order book
- Retail Routable Orders may interact with RPI interest, other interest on the Limit order book and/or can be routed away to other markets for execution

When RPI orders execute with Retail Taker orders, a new billing indicator value will be returned. Depending on the type of Retail Taker order, Retail Taker orders that execute with non-RPI interest will receive an existing billing value.

## 4.8 Gateway Throttle Mechanism

In order to protect the Trading Engine from an overload of incoming messages, the BCCG Gateway employs a session-level throttle mechanism. This is a configurable value currently set to 1000 messages per second on a fixed 1 second basis. In the event this throttle mechanism is activated, the gateway will slow the sending of incoming messages down to the Trading Engine during the throttle period (i.e., messages will be queued) so as to not exceed the defined message threshold.

## 4.9 Self-Trade Prevention Service

The NYSE offers a Self-Trade Prevention (STP) service. This service is designed to allow firms to better manage their order flow and prevent unintended executions with themselves. STP is currently available for limit orders and Market orders. Orders sent to Floor brokers that have the STP modifiers will be supported in a later phase.

One of these two STP modifiers, along with matching ClientID's (MPIDs), must be present on each order to prevent two orders from the same firm from trading with each other.

### **STP Cancel Newest (STPN) – SelfTradeType = N**

- An incoming order marked with the STPN designation will not execute against opposite side resting interest that is also marked with the STP designation for the same ClientID (MPID). Instead, the incoming order or re-priced order will be automatically cancelled back to the order originator. The resting order will remain on the order book.

### **STP Cancel Oldest (STPO) – SelfTradeType = O**

- An incoming order marked with the STPO designation will not execute against opposite side resting interest that is also marked with the STP designation for the same ClientID or MPID. Instead, the resting order will be automatically cancelled back to the order originator. The incoming order will then continue to auto execute or be placed in the order book.

## 4.10 Mid-Point Passive Liquidity (MPL) Order

NYSE supports a Midpoint Passive Liquidity (MPL) order type. MPL Orders are un-displayed limit orders that are priced at the midpoint of the Protected Best Bid Best Offer (PBBO). Users of an MPL Order have the option of applying additional modifiers to the order type as well as interacting with all other order types. MPL orders do not participate at the Open, Close or in any manual trade. MPL orders are sent directly to the NYSE Matching Engine

## 4.11 Bulk Cancel Processing

The NYSE supports a bulk cancel message to allow customers to target multiple orders to cancel by firm mnemonic with a single cancel message. Customers are able to bulk cancel and block, bulk block or bulk unblock via a single message. In this phase, customers will have the ability to send a bulk action message to our Universal Trade Platform (UTP) that may include the cancellation of Broker System generated order messages for that firm mnemonic. In future phases, customers will be able to bulk cancel for an entire risk group and route bulk cancel messages directly to the NYSE Broker

Systems. Member firms that currently utilize a Service Bureau for order submission will need to contact their service provider to determine when the technical changes outlined below will be supported.

Customers will be required to support new Cancel Message Variant F.2 or later in order to take advantage of this new bulk cancel functionality. In order to distinguish a bulk cancel message from an individual cancel message a new required field has been added to the F.2 variant. This field must be populated for all cancel messages, not just bulk cancel messages. Customers wishing to cancel any combination of orders types will be required to submit a bulk cancel message for each order type and mnemonic combination. UROUT messages for each of the orders that are canceled are sent through the connection in which the original order has been received.

#### 4.12 MEOrderID and Unsolicited Order Ack Subscription

In support of the NYSE Integrated Feed (IF) product, NYSE returns a unique Exchange generated order id (MEOrderID) populated on order acknowledgements and execution reports that can be used to match activity on the Integrated Feed. The Integrated Feed provides a comprehensive order-by-order view of events in the NYSE equities markets. This single high-performance product integrates orders and trades in sequence, providing a more deterministic and transparent view of the order book and related activity.

There are times when a single order may have multiple MEOrderIDs assigned as size of the order changes. In these instances, the NYSE will return an additional, unsolicited order acknowledgement that contains the newly assigned MEOrderID. The return of these new unsolicited order acknowledgments is on a subscription basis by session at the time of login.

## UTPDirect Message Format

### 4.13 Common Identifiers

#### 4.13.1 Connection Identifier

Each session is identified uniquely with a SenderCompID assigned by NYSE that identifies the connection of the brokerage firm that sends an order. SenderCompID is unique for every connection to Binary CCG and must be supplied in the logon message.

#### 4.13.2 Firm Identifier

The OnBehalfOfCompID for the firms is assigned by NYSE and is used to uniquely identify the brokerage firm that sends an order. It is used to identify the customer and must be supplied on all incoming messages. NYSE will reject incoming messages with no OnBehalfOfCompID or with an invalid ID.

### 4.14 NYSE Specific Order Identification Notes

The order originators and/or entering entities must populate ClOrdID with an identification number that corresponds to the Branch Code and Sequence Number of the originator. The data type of ClOrdID is a character string, and its value is a unique identifier (branch, sequence number and session date). The order originator and/or entering entity must use a unique ClOrdID for subsequent orders, cancels, and cancel replace requests. The messages are chained together since each message refers to the previous message by including its ClOrdID in the field OrigClOrdID. **Binary CCG does not guarantee uniqueness of ClOrdID.**

| Field Name  | Description   |
|-------------|---|
| ClOrdID     | <p>Unique identifier for an Order as assigned by the order originator. Uniqueness must be guaranteed by mnemonic within a single trading day (across multiple lines of a firm), the session date is required as part of the field.</p> <p> <b>The ClOrdID must be unique within a single trading day for a given firm mnemonic. CCG does NOT validate the uniqueness of ClOrdID, it will simply forward the order to the downstream systems.</b></p> |
| OrigClOrdID | ClOrdID of the previous order (NOT the initial order in a cancel replace chain) as assigned by the order originator, used to identify the previous order in cancel and cancel/replace requests.   |
| MEOrderID   | Represents the OrderID assigned by the Matching Engine. Currently supported on outbound messages only. May be supported in the future implementation on inbound messages.   |

## 4.15 Binary Prices

Prices are represented as whole integers in binary. The decimal position can be determined by using the Price Scale code in the message. To determine the decimal price, divide the whole integer price by the value that the price scale code represents.

- **Example 1:** Whole integer price is 1350 and the price scale code is 2. To determine the decimal price, divide 1350 by 100 ( $10^2$  or  $10^2$ ). The result is a decimal price of 13.50.
- **Example 2:** Whole integer price is 135 and the price scale code is 1. To determine the decimal price, divide 135 by 10 ( $10^1$  or  $10^1$ ). The result is a decimal price of 13.5 (same as 13.50).
- **Example 3:** Whole integer price is 25 and the price scale code is 0. The price scale code is 0 so no division is necessary. The result is a price of 25 (same 25.00).

**The Price Scale field is a single character.**

**Note:** For order entry, the maximum price scale for BRK A is 2. \*\*When migrated to Pillar, note that the XDP Price Scale for BRK A will become 3. However, in UTP Direct, the maximum order price scale for BRK A will remain as 2.

## Price Scale Codes

| Price Scale Code   | Denominator Value | Denominator Value (factor of 10) |
|--|-------------------|----------------------------------|
| "0"  | N/A               | N/A                              |
| "1"  | 10                | $10^1$ ( $10^1$ )                |
| "2"  | 100               | $10^2$ ( $10^2$ )                |
| "3"  | 1,000             | $10^3$ ( $10^3$ )                |
| "4"  | 10,000            | $10^4$ ( $10^4$ )                |
| "6"  | 1,000,000         | $10^6$ ( $10^6$ )                |
| **For symbols migrated to Pillar, on messages from Exchange to Firm (Acks, Fills, etc.) only |                   |                                  |

**Note:** Price Scale Code of "0" indicates that the whole integer price in the price field is the actual price and no conversion or division is necessary.

## 4.16 Message Formatting

The message tables provided later in the document indicate when a particular field is required (✓) for the particular type of message. When a field is not required, that field should be set to null (or zeroes in binary). Note that all message fields must be provided in the exact position indicated even if not used (then null filled to binary zeroes if unused). All of the messages are of a fixed size with positional fields at a preset location.

## 4.17 Message Type Summary

The table below provides a summary of all UTP Direct messages and message variants. UTP Direct messages are identified using a short value that is mapped, for reference purposes, to its corresponding FIX message equivalent as much as possible. For example, a “New order” message that is identified as message type ‘D’ in FIX maps to “0x0041” in UTP Direct. Throughout this document, you will see that we reference the “New Order” message as message type “D.1” in order to correlate the two messages.

Future implementations may introduce other “New order” message variations. These variations will also be referred to as message type “D” but with a new qualifier in order to further distinguish the added message(s) (example, “D.2”). This design overcomes the limitation found with using a fixed length message protocol and allows the Exchange to create additional variants to support the introduction of future products and services.

| Direction  | Message                   | Message Type (ASCII) | Variant | Message Type (Binary) | Description   |
|--|---------------------------|----------------------|---------|-----------------------|---|
| <b>C = Client to Exchange<br/>X = Exchange to Client</b> |                           |                      |         |                       |   |
| C X  | Heartbeat Message (0)     | 0                    | 1       | 0x0001                | Heartbeat message   |
| C X  | Test Message (1)          | 1                    | 1       | 0x0011                | Test and heartbeat  |
| C X  | Logon (A)                 | A                    | 1       | 0x0021                | Initial Logon to UTPDirect server                         |
| C  | New Order (D1)            | D                    | 1       | 0x0041                | New Order Message   |

## 5. Session Management

### 5.1 Overview

Clients initiate a TCP/IP session to the Binary CCG Server. Session logon is always initiated by the client connection. Application messages may be exchanged between the client and server after logon is successful. A client has five seconds after connection to send a logon request, or the server drops the connection.

Messages have a defined number of fixed-length fields, containing both binary and ASCII data. All binary data is sent in network Endian format (Big Endian). All ASCII data is left justified and null padded.

During periods of inactivity, the server and/or client use the Test Request and Heartbeat messages to ensure the connection is up and functioning properly. The client must be able to respond to Test Request messages from the server by sending a Heartbeat message.

### 5.2 Disconnects

TCP/IP connections can experience disconnections for many reasons. To ensure that no messages are lost when disconnections occur, each order message has a message sequence number. Clients assign sequence numbers to the messages they send the server and the server tracks these numbers. Similarly, the server assigns its own sequence numbers to the order responses that it sends to the client.

When clients log on after a disconnection, information in the Logon message allows the client and server to exchange the sequence number of the last message that they processed from the other party. Each side can then start sending the next message that has not been processed by the other side.

### 5.3 Logon Message (and Logon Accepted) (A.1)

Clients use the Logon message to establish a connection, identify the message version profile they will use for the client session and identify the last response message they have processed. The server may accept or reject the client logon. If logon is successful, Binary CCG sends a Logon message back to the client indicating the last request message the server has processed.

The Last Sequence Number field is used to recover order messages when disconnections happen. For the initial connection, clients should set the Last Sequence Number field to zero. The Logon response from the server will also show zero for the initial connection.

If an inadvertent disconnect happens, clients should use the Last Sequence Number field to indicate the last order response message received from the server. The server will begin sending order responses from the next sequence number.

Similarly, the server sends back the sequence number for last client order request that the server processed in the Logon response message. Clients should use this to determine if order messages have been dropped and should be sent again.

Clients should not skip sequence numbers. A client can however pass '-1' as the Last Sequence Number to notify the server not to validate the next sequence number. The server will accept the next sequence from the client and then send what it thinks is the next outbound sequence.

| Logon Message              | Length  | Type          | Required | Notes and Values   |        |         |   |   |    |   |       |   |
|----------------------------|---|---------------|----------|--|--------|---------|---|---|----|---|-------|---|
| MessageType                | 2   | Binary        | ✓        | 0x0021   |        |         |   |   |    |   |       |   |

|---------------|--------|---------|----------|--|
|               |        | Numeric |          | 0 = Not Subscribed<br>1 = Activate Unsolicited Order Acknowledgments |
| Filler        | 2      | Alpha   | ✓        |  |
| Total         | 60     |         |          |  |

### Message Version Profile

The system provides the following “default” profile if the user fails to supply one with the Logon message. The binary message type (2 bytes – binary value) of the expected message variant is provided by the customer. The message version profile will be useful for the customers when additional variants are introduced and offers the flexibility to the customer to handle the transition between the variants smoothly. The message version profile is the list of binary message types the customer is expecting from the gateway.

| MsgType (ASCII) | Variant | MsgVersion (Binary) | Description  |
|-----------------|---------|---------------------|--|
| 'A'             | 1       | 0x0021              | Logon Ack  |
| 'L'             | 1       | 0x0141              | Logon Reject   |
| 'a'             | 1       | 0x0091              | New Order Ack  |
| '4'             | 1       | 0x00D1              | UROUT  |
| 'E'             | 1       | 0x00B1              | Cancel/Replace Ack                                     |
| '5'             | 1       | 0x00E1              | Order Replaced Ack                                     |
| '6'             | 1       | 0x00A1              | Cancel Order Ack                                       |
| 'C'             | 1       | 0x0101              | Bust/Correct   |
| '2'             | 1       | 0x0081              | Order Fill (Short) - defaults to Short if not provided |
| 'X'             | 1       | 0x00C1              | Order Fill (Verbose)                                   |
| '8'             | 1       | 0x00F1              | Order Reject   |

Any profile supplied by the user will override the default profile. If the user fails to supply a particular message type then the corresponding “default” profile will apply for that message.

## 5.4 Logon Accepted Message (A.1)

UTPDirect sends a Logon Accept message back to the client with the same structure as described for the Logon Message. Note that the returned Message Version Profile will indicate the actual profile that has been established for that session and the sessions cancel on disconnect status.

## 5.5 Logon Reject Message (L.1)

UTPDirect sends a Logon Reject message only when logon validation fails and then closes the connection. If logon was successful, UTPDirect sends a Logon message back to the client.

The Client Logon Status field indicates the reason for the rejection.

| Logon Reject Message  | Length    | Type   | Required | Notes and Values   |
|-----------------------|-----------|--------|----------|--|
| MessageType           | 2         | Binary | ✓        | 0x0141   |
| MsgLength             | 2         | Binary | ✓        | Binary length of the message   |
| MsgSeqNum             | 4         | Binary | ✓        | Ignore (future use)  |
| LastMsgSeqNumReceived | 4         | Binary | ✓        | The sequence number for the last message received from the client to the UTPDirect gateway |
| LastMsgSeqNumSent     | 4         | Binary | ✓        | The sequence number for the last message sent by the client to the UTPDirect gateway       |
| Reject Type           | 2         | Binary | ✓        | The rejection code (see reject section later in this document)                             |
| Text                  | 40        | Alpha  | ✓        | The rejection reason description   |
| Filler                | 2         |        | ✓        |  |
| <b>Total</b>          | <b>60</b> |        |          |  |

## 5.6 Test Request Message (1.1)

The Test Request message is sent by either side of the connection to request the other side to respond with a Heartbeat message, when that side does not receive a message during periods of inactivity. If the other side does not respond to a Test Request message, the application should assume an abnormal situation and terminate the TCP/IP connection.

The server will send a Test Request message only during periods of inactivity after the first heartbeat period (60 seconds). At a minimum, the client must respond to this message with a Heartbeat message. The server will disconnect the client following a subsequent period with no activity.

| Test Request Message | Length | Type   | Required | Notes and Values             |
|----------------------|--------|--------|----------|------------------------------|
| MessageType          | 2      | Binary | ✓        | 0x0011                       |
| MsgLength            | 2      | Binary | ✓        | Binary length of the message |
| MsgSeqNum            | 4      | Binary | ✓        | Ignore (future use)          |

| Test Request Message | Length   | Type | Required | Notes and Values |
|----------------------|----------|------|----------|------------------|
| <b>Total</b>         | <b>8</b> |      |          |                  |

## 5.7 Heartbeat Message (0.1)

The Heartbeat message is used to respond to Test Request messages. It lets the other side know the connection is still good during periods of inactivity. The server heartbeat interval is 60 seconds.

At a minimum a client must be able to receive Test Request messages and respond with Heartbeat messages. During periods of activity the server will not send Test Request or Heartbeat messages and there is no need for the client to send them.

| Heartbeat Message | Length   | Type   | Required | Notes and Values             |
|-------------------|----------|--------|----------|------------------------------|
| MessageType       | 2        | Binary | ✓        | 0x0001                       |
| MsgLength         | 2        | Binary | ✓        | Binary length of the message |
| Sequence          | 4        | Binary | ✓        | Ignore (future use)          |
| <b>Total</b>      | <b>8</b> |        |          |                              |

## 6. Application Messages

This section describes the Application Messages in the UTPDirect protocol. Binary data is in Network Endian format (Big Endian). All Filler and Padding fields must contain null characters. Non-binary fields should be left justified and null padded. Additional variants may be defined in the future as additional functionality is added.

### 6.1 New Order Message

#### 6.1.1 Message Variant (D.1)

The firm can send an order using the New Order message (D), which will be either be a) acknowledged (Order Ack Message: a1) indicating the order has passed all the required order validation or b) rejected (Reject Message: 8) with the appropriate reject reason code.

| New Order Message<br>D.1 | Length | Type   | Required | Notes and Values   |
|--------------------------|--------|--------|----------|--|
| MessageType              | 2      | Binary | ✓        | 0x0041   |
| MsgLength                | 2      | Binary | ✓        | Binary length of the message   |
| MsgSeqNum                | 4      | Binary | ✓        | Client-assigned message sequence number  |
| OrderQty                 | 4      | Binary | ✓        | number of shares<br>**For symbols migrated to Pillar: <ul style="list-style-type: none"> <li>1 – 25,000,000 for Auction only order types (Opening Only/MOO, LOO; MOC, LOC, Closing Offset)</li> <li>1 – 5,000,000 for all other order types</li> </ul>   |
| MaxFloorQty              | 4      | Binary |          | Maximum number of shares within an order to be displayed at any given time. The minimum value for this field is zero. If specifying a quantity other than zero, the value must be equal to one (1) times the securities unit of trade (i.e., 100 shares).  |
| Price                    | 4      | Binary |          | The price, as a long value. Price is scaled based on the Price Scale field. Described in section 4.3.<br><br>Prices with values exceeding 10 characters inclusive of the decimal point will be rejected.<br><br>Represents the Limit Price and required for Limit Orders.<br><br>**For symbols migrated to Pillar – maximum price determined by XDP Price Scale for the symbol: <ul style="list-style-type: none"> <li>- Max price for securities with a price scale of 6 is \$4,294.672960</li> <li>- Max price for securities with a price scale of 4 is \$429,467.2960</li> <li>- Max price for securities with a price scale of 3 is \$999,999.99</li> </ul> |

| New Order Message<br>D.1 | Length             | Type             | Required | Notes and Values   |      |                    |    |     |     |     |     |     |     |     |     |     |     |     |         |     |

## 6.2 Order Cancel Message (F.1)

**\*\*For symbols migrated to Pillar – Cancel to Reduce via Message Types F.1 and F.2 not supported; instead use Cancel/Replace to reduce quantity and maintain ranking on the book**

A Cancel Request (Message Type F) can be used to reduce the quantity of an order (also known as a partial cancel), to cancel the full remaining order quantity, to perform a bulk cancel, a bulk block, a bulk cancel and block or a bulk unblock. Following are the possible responses: Cancel Ack, Reject or UROUT. When reducing the quantity of an order, the Cancel Quantity and Leaves Quantity fields must be present allowing the user to keep their position on the DMM's book.

### 6.2.1 Message Variant (F.1)

Single Order Cancel Message

| Order Cancel Message<br>F.1 | Length | Type   | Required | Notes and Values  |

6.3.2 Message Variant (G.2)

This message requests that an order booked at the Exchange be modified. Clients can change the quantity, price, or type of order in the cancel replace message.

| Order Cancel/Replace Message<br>G.2 | Length | Type   | Required | Notes and Values  |
|-------------------------------------|--------|--------|----------|---|
| MessageType                         | 2      | Binary | ✓        | 0x0072  |
| MsgLength                           | 2      | Binary | ✓        | Binary length of the message  |
| MsgSeqNum                           | 4      | Binary | ✓        | Client-assigned sequence number   |
| MEOrderID                           | 4      | Binary |          | Exchange assigned OrderID. (will be supported in a future phase)  |
| OrderQty                            | 4      | Binary | ✓        | Shares for this order<br>**For symbols migrated to Pillar: <ul style="list-style-type: none"> <li>• 1 – 25,000,000 for Auction only order types (Opening Only/MOO, LOO; MOC, LOC, Closing Offset)</li> <li>• 1 – 5,000,000 for all other order types</li> </ul>   |
| MaxFloorQty                         | 4      | Binary |          | Maximum number of shares within an order to be shown on the exchange floor at any given time. The minimum value for this field is zero. If specifying a quantity other than zero, the value must be equal to one (1) times the securities unit of trade (i.e., 100 shares).   |
| Price                               | 4      | Binary | ✓        | The price, as a long value. Price is scaled based on the Price Scale field. Described in section 4.3.<br>Represents the Limit Price for Limit Orders.<br><br>Prices with values exceeding 10 characters inclusive of the decimal point will be rejected.<br><br>Note: For RPI orders, limit prices will be accepted in sub-pennies above and below \$1.00, but must be in multiples of the minimum offset price (currently defined as 0.0010).<br><br>**For symbols migrated to Pillar – maximum price determined by XDP Price Scale for the symbol: <ul style="list-style-type: none"> <li>- Max price for securities with a price scale of 6 is \$4,294.672960</li> <li>- Max price for securities with a price scale of 4 is \$429,467.2960</li> <li>- Max price for securities with a price scale of 3 is \$999,999.99</li> </ul> |
| OffsetPrice                         | 4      | Binary | C        | Offset or minimum price improvement value from the current Bid or Offer. Must be zero, greater than or equal to \$0.0010 and must be in multiples of \$0.0010.<br><br>Note: This field is required if sending Retail Price Improvement (RPI) orders.  |

| Account              | 10     | Alpha Numeric | C        | User-defined information that is not validated. Common examples include user or account IDs and will be returned in the outbound messages. Will be returned if provided in the inbound message. Control characters not allowed.   |

| Order Killed Message | Length    | Type          | Required | Notes and Values                      |
|----------------------|-----------|---------------|----------|---------------------------------------|
| OrigClientOrderID    | 17        | Alpha Numeric | ✓        | Client order ID of the canceled order |
| Filler               | 2         | Alpha         |          |                                       |
| <b>Total</b>         | <b>56</b> |               |          |                                       |

## 6.7 Cancel Replace Ack Message (E.1)

This message informs clients that a Cancel/Replace message has been received but is not yet applied because an order cannot be immediately replaced (for example, the order is linked to another exchange). See also the Replaced Message for other responses to Cancel/Replace messages.

| Cancel Replace Ack Message<br>E.1 | Length    | Type          | Required | Notes and Values  |
|-----------------------------------|-----------|---------------|----------|---|
| MessageType                       | 2         | Binary        | ✓        | 0x00B1  |
| MsgLength                         | 2         | Binary        | ✓        | Binary length of the message  |
| MsgSeqNum                         | 4         | Binary        | ✓        | Exchange-assigned sequence number   |
| MEOrderID                         | 4         | Binary        |          | Exchange assigned Order ID.<br><br>If provided on inbound cancel/replace request it will be returned.   |
| TransactTime                      | 4         | Binary        | ✓        | Time the message was sent in milliseconds since midnight  |
| DeliverToCompID                   | 5         | Alpha         | ✓        | OnBehalfOfCompID from the client is returned in this field  |
| TargetSubID                       | 5         | Alpha         | C        | SenderSubID from the client is returned in this field.<br>If provided on inbound cancel/replace request, it will be returned.   |
| Account                           | 10        | Alpha Numeric | C        | User-defined information that is not validated. Common examples include user or account IDs and will be returned in the outbound messages. Will be returned if provided in the inbound message. Control characters not allowed. |
| ClientOrderID                     | 17        | Alpha Numeric | ✓        | Client order ID of the cancel replace message   |
| Filler                            | 3         | Alpha         |          |   |
| <b>Total</b>                      | <b>56</b> |               |          |   |

## 6.8 Order Replaced Message (5.1)

This message indicates that an order has been successfully replaced. It is sent only when the replacement order is not immediately executable (it is booked). The ClientOrderID from the new order becomes the ClientOrderID in the replaced message.

| Replaced Message<br>5.1 | Length    | Type             | Required | Notes and Values  |
|-------------------------|-----------|------------------|----------|---|
| MessageType             | 2         | Binary           | ✓        | 0x00E1  |
| MsgLength               | 2         | Binary           | ✓        | Binary length of the message  |
| MsgSeqNum               | 4         | Binary           | ✓        | Exchange-assigned sequence number   |

## 7. Failure Recovery Methods

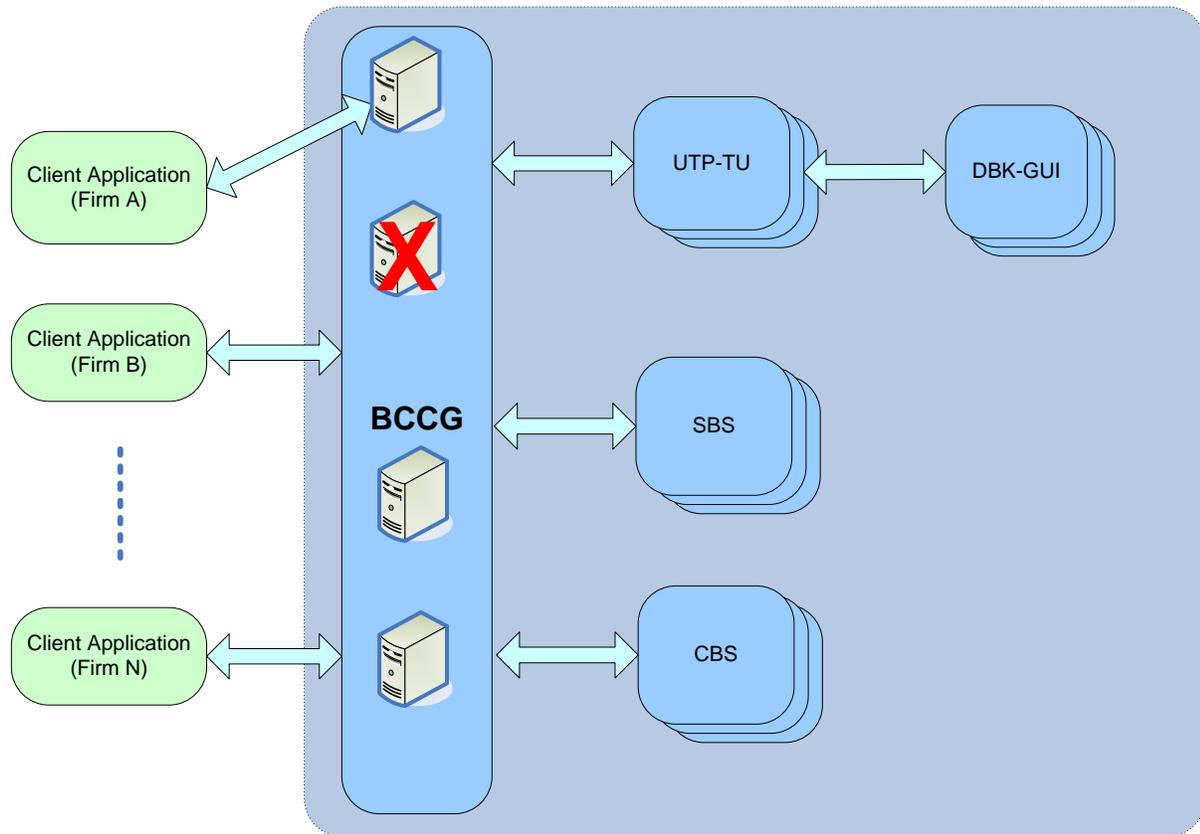

### 7.1 Binary CCG Failure Recovery

In the event of the Binary CCG gateway failure or hardware failure resulting in a non-recoverable scenario of Binary CCG, the application rolls to the spare server. The spare server assumes the IP of the failed server and the data volume is mounted (shown in figure 2). This recovery process is completely transparent to the clients connected to that gateway.

**Figure 2: Binary CCG - Failure Recovery**

The Binary CCG will start accepting incoming connections after the recovery has been completed. Subsequent attempts to connect to the server will be successful (shown in figure 3). The application level recovery will be handled by the gateway and the client based on the sequence number of the messages last received on either side and is detailed in the next section.

**Figure 3: Binary CCG - After Recovery**

## 7.2 Customer Application Failure Recovery

Following a failure recovery scenario, the application state may end in one of the following scenarios.

### 7.2.1 Synchronized State

Both the gateway and the client recovered without any issues and are in sync with respect to the sequence numbers. Client sends a logon message with the last received sequence number and the gateway sends the logon response back with the last sequence number sent by the client. The message flow resumes smoothly without any issues.

### 7.2.2 Out of sync State

**Client End – Low Sequence Number:** During the failure scenario, if the messages are lost in transit, the gateway and the client may end up in an out-of-sync state. During this scenario, the client sends a logon message with the last received sequence number and the gateway sends the logon response back with the last sequence number sent by the client. Since the client's received sequence is lower than what the gateway sent, the gateway will resume the outgoing traffic flow from the message of the client's received sequence.

**Gateway end – Low Sequence Number:** During the same failure scenario, it is possible that the gateway has a lower sequence number than the client's message which was sent. In this scenario, the gateway will send the logon response with the sequence number of the message it actually persisted. The client can now choose to send the missing data or ignore the sequence and proceed from their current state.

**High Sequence Number:** High sequence number on either end of the connection, client or the gateway means there is error scenario in the traffic flow (may be due to error in application). In this scenario, if the error scenario is recognized at the gateway, it will terminate the connection and a manual resolution is needed. The client behavior is expected to be the same.

**Non-recoverable scenario:** In the event of a non-recoverable scenario from the client side, the client can choose to resume the message flow by sending in a logon message with -1 as the last received sequence number. In this scenario, the gateway will ignore the sequence number validation and will accept the sequence number provided by the client and proceed.

## 8. NYSE Equities Order Types

\*\*For symbols migrated to Pillar - for information on the functional changes to various order types that will take effect for symbols migrated to NYSE Pillar, please see: [Functional Differences between NYSE Group Equities Platforms](#).

| Order Type                | Field(s)   | Description  |
|---------------------------|--|--|
| Market Order              | OrdType = 1 (market)<br>TimeInForce = 0 (Day)  | An order to buy or sell that is to be executed at the best price obtainable.<br><br>**For symbols migrated to Pillar - MinimumTradeSize and MinimumTriggerVolume not supported on market order   |
| Limit Order               | OrdType = 2 (limit)  | An order to buy or sell at a specified price or better. A marketable limit order is a limit order to buy/sell at or above/below the consolidated best offer/bid for the security.  |
| Sell Short Order          | OrdType = 1 (market) or 2 (limit)<br>Side = 5  | A limit or market order to sell short a security not owned by the seller. The short sale rules apply to all traders using this function.   |
| Sell Short Exempt Order   | OrdType = 1 (market) or 2 (limit)<br>Side = 6  | A limit or market order to sell short a security that is exempt from current Sell Short restrictions.  |
| Day Order                 | OrdType = 1 (market) or 2 (limit)<br>TimeInForce = 0 (Day)   | A market or limit order that, if not executed, expires at the end of the trading day on which it was entered.  |
| IOC (Immediate Or Cancel) | OrdType = 2 (limit)<br>TimeInForce = 3 (IOC)   | A limit order that trades immediately and automatically cancels any unfilled portion. These orders will route to protected quotes, if the order cannot be executed at the NYSE.  |
| Minimum Trade Size Order  | OrdType = 2 (limit)<br>TimeInForce = 3 (IOC)<br>MinimumTradeSize >= 0<br>OR<br>MinimumTriggerVolume = value equal to or less than order quantity, or zero **for symbols migrated to Pillar only; see note at right | A Minimum Trade Size Quantity for orders with a Time in Force of "IOC".<br>Value may be Zero, also see "StatusIndicators" field.<br><br>**For symbols migrated to Pillar:<br><ul style="list-style-type: none"> <li>- If specified on Limit IOC order, MinimumTriggerVol or MinQty must be at least one round lot, less than or equal to OrderQty (or zero), and sent with RoutingInstruction (9487) = SOC</li> <li>- Limit IOC entered with BOTH MinimumTriggerVolume and MinimumTradeSize is rejected</li> </ul> Beginning on a date announced via Trader Update: <ul style="list-style-type: none"> <li>- Limit IOC entered with MinimumTriggerVolume is handled as Minimum Fill order</li> <li>- Limit IOC entered with MinimumTradeSize is handled as Minimum Trade Size order</li> </ul> |

| Order Type                    | Field(s)  | Description  |
|-------------------------------|---|--|
|                               |   | <ul style="list-style-type: none"> <li>- For details, see <a href="#">Functional Differences between NYSE Group Equities Platforms</a></li> </ul>  |
| Block Reserve Order           | OrdType = 2 (limit)<br>DOTReserve = Y<br>MaxFloorQty = (show size)**<br>TimeInForce = 0 (Day)   | A limit order with a minimum published amount of 100 shares that replenishes at the minimum or at a different amount set by the user after each execution. Both the displayed portion and hidden reserve portion will participate in all electronic executions.<br><br>**For symbols migrated to Pillar - Reserve order may only be entered with MaxFloorQty = a multiple of the symbol's round lot parameter. Mixed lots are rejected   |
| Dark Reserve Order            | OrdType = 2 (limit)<br>DOTReserve = Y<br>MaxFloorQty = 0 (Zero)<br>TimeInForce = 0 (Day)<br><br><b>Optional:</b><br><br>**For symbols migrated to Pillar only; see note at right<br><br>MinimumTradeSize = value equal to or less than order quantity, or zero<br><br>OR<br><br>MinimumTriggerVolume = value equal to or less than order quantity, or zero **for symbols migrated to Pillar only; see note at right | A limit order with zero published quantity that will not be displayed to the DMM or in NYSE OpenBook®.<br><br>Dark Reserve orders can be priced at, between or outside the displayed quote. This order type will not participate in manual, floor based trades, including the opening and closing trades, but will participate in all electronic executions. All dark reserve orders entered prior to the open will receive an unsolicited cancel, so as not to trigger "a cleanup trade" after the opening trade when the DMM is making an aftermarket.<br><br>**For symbols migrated to Pillar: <ul style="list-style-type: none"> <li>- Reserve order may only be entered with MaxFloorQty = a multiple of the symbol's round lot parameter. Mixed lots are rejected</li> </ul> Beginning on a date announced via Trader Update: <ul style="list-style-type: none"> <li>- If specified, MinimumTriggerVol or MinQty must be at least one round lot and less than or equal to OrderQty (or zero)</li> <li>- Non-Displayed Limit order entered with MinimumTriggerVolume is handled as Minimum Fill order</li> <li>- Non-Displayed Limit order entered with MinimumTradeSize is handled as Minimum Trade Size order</li> <li>- For details, see <a href="#">Functional Differences between NYSE Group Equities Platforms</a></li> </ul> |
| Intermarket Sweep Order (ISO) | OrdType = 2 (limit)<br>Side = 1, 2, 5, 6<br>TimeInForce = 0 (Day) or 3 (IOC)<br>RoutingInstruction = I  | A limit order that trades at the NYSE only and will trade through even when another market center is publishing a better quotation. When sending an Intermarket Sweep Order, the sender fulfills Reg NMS order-protection obligations and NYSE Rules by concurrently sending orders to market centers with better prices.<br><br>**For symbols migrated to Pillar: <ul style="list-style-type: none"> <li>- Reserve quantity (MaxFloorQty) not supported on ISO order</li> <li>- MinimumTradeSize and MinimumTriggerVolume</li> </ul>  |

| Order Type   | Field(s)   | Description   |
|--|--|---|
|  |  | not supported on ISO order  |
| Trade-at Intermarket Sweep Order (Trade-at ISO)      | OrdType = 2 (limit)<br>Side = 1, 2, 5, 6 (For IOC orders only)<br>TimeInForce = 3 (IOC)<br>Execlnst = y (Trade-at ISO)               | An immediate or cancel limit order that trades at the NYSE only, and may trade against undisplayed liquidity at a price equal to the limit price of the inbound Trade-at ISO order. The Exchange may rely on the order sender to have satisfied all Protected Quotations better than or equal to the limit price of the Trade-at ISO order.<br><br>**For symbols migrated to Pillar - MinimumTradeSize and MinimumTriggerVolume not supported on Trade-at ISO order   |
| Intermarket Sweep Order Add Liquidity Only (ISO ALO) | OrdType = 2 (limit)<br>Side = 1 (Buy), 2 (Sell), 5 (Sell Short) or 6 (Sell Short Exempt)<br>TimeInForce = 0 (Day)<br>RoutingInst = L | An limit day order that trades at the NYSE only and on arrival will trade through even when another market center is publishing a better quotation only if adding liquidity. Any remaining portion will then be placed on the Order book and will reprice when necessary in order to avoid taking liquidity.<br><br>Note: When sending an Intermarket Sweep Order, the sender fulfills RegNMS order-protection obligations and NYSE Rules by concurrently sending orders to market centers with better prices upon arrival.<br><br>**For symbols migrated to Pillar - Reserve quantity (MaxFloorQty) not supported on ISO ALO order |
| RegNMS Immediate or Cancel Order (SOC)               | OrdType = 2 (limit)<br>TimeInForce = 0 (day) or 3 (IOC)<br>RoutingInstruction = S  | A limit immediate or cancel order that is to be executed in whole or in part on the NYSE only. This type of IOC order will not trade through protected quotes.  |
| Do Not Ship (DNS)                                    | OrdType = 2 (limit)<br>TimeInForce = 0 (day)<br>RoutingInstruction = D   | A limit Day order that is to be executed in whole or in part by the NYSE only. The portion not executed is quoted, and in the event the order would require routing to an away market center, it would be immediately cancelled.<br><br>**For symbols migrated to Pillar - MinQty and MinimumTriggerVolume not supported on DNS order   |
| Closing Offset (CO)                                  | OrdType = 2 (limit)<br>TimeInForce = 0 (day)<br>RoutingInstruction = C   | A limit Day order that can only execute At the Close to offset a market imbalance.  |
|  | **For symbols migrated to Pillar – available for Tape A securities only  |   |

| Order Type   | Field(s)  | Description   |
|--|---|---|
| Opening Only Order   | <p><u>Market</u><br/>OrdType = 1 (Market)<br/>TimeInforce = 2 (OPG)</p> <p>Or</p> <p><u>Limit</u><br/>OrdType = 2 (Limit)<br/>TimeInforce = 2 (OPG)</p>   | <p>A market or limit order that is to be routed as an on open order to participate in the market opening or reopening process. Any balance not executed following the opening trade is cancelled. OPG orders entered after the market open are automatically cancelled.</p> <p><b>**For symbols migrated to Pillar - MinimumTradeSize and MinimumTriggerVolume not supported on Opening Only orders</b></p> |
| Market On Close (MOC)  | OrdType = 5 (market on close)   | A market order that is to be executed only during the closing auction.  |
| Limit on Close (LOC)   | OrdType = B (limit on close)  | A limit DAY order that is entered for execution at the closing price, and if not so executed, is to be treated as cancelled.  |
| Retail Price Improvement (RPI)<br><br>**For symbols migrated to Pillar – available beginning on a date announced via Trader Update               | <p>OrdType = 2 (limit)<br/>Side = 1, 2, 5, or 6<br/>TimeInforce = 0 (day)<br/>RoutingInstruction = R</p> <p>Note: OffsetPrice is required for this order type.</p> <p>Note: LMT Price is allowed in sub-pennies for values greater than \$1.00 and less than \$1.00, but must be in multiples of the minimum offset price (currently defined as \$0.0010).</p> <p>Note: Not allowed for Z-mnemonics</p> | <p>Will only trade with Retail Taker orders.</p> <p>Incoming RPI interest in sub-pennies is accepted— however, any RPI interest that would result in an execution below \$1.00 will be prevented from trading.</p>  |
| Retail Taker Type 1<br><br>Retail Only (RTO)<br><br>**For symbols migrated to Pillar – available beginning on a date announced via Trader Update | <p>OrdType = 1 (market) or 2 (limit)<br/><br/>Side = 1, 2, 5, or 6<br/><br/>TimeInforce = 0 (day) or 3 (IOC)<br/><br/>RoutingInstruction = 1</p> <p><i>Note: Not allowed for Z-mnemonics</i></p>  | <p>Retail Taker order that only trades against Retail Price Improvement (RPI) orders.</p> <p>All Retail Taker orders are treated as IOC.</p>  |

Interest will automatically reprice to prevent taking liquidity.<br><br>May optionally contain the STP order designation. May optionally contain a DOT Reserve Indicator and MaxFloorQty.<br><br>If MaxFloorQty is entered, must be greater than 0.<br><br>**For symbols migrated to Pillar – ALO with MaxFloorQty not supported  |
| Intermarket Sweep Order Add Liquidity Only (ISO ALO) | OrdType = 2 (limit)<br>Side = 1 (Buy), 2 (Sell), 5 (Sell Short) or 6 (Sell Short Exempt)<br><br>TimeInForce = 0 (Day)<br><br>RoutingInst = L  | A limit day order that trades at the NYSE only and on arrival will trade through even when another market center is publishing a better quotation only if adding liquidity. Any remaining portion will then be placed on the Order book and will reprice when necessary in order to avoid taking liquidity.<br><br>Note: When sending an Intermarket Sweep Order, the sender fulfills RegNMS order-protection obligations and NYSE Rules by concurrently sending orders to market centers with better prices upon arrival. |

## Appendix A: Field Descriptions and Values

### LastMarket

The LastMarket field will be specified on execution reports. Valid values for this field:

- N – NYSE

The client may need this field for back office clearing and reporting purposes. CCG will return the actual handling market center on execution reports regardless of the value designated on the incoming order message.

### DBExecID

This field contains a value that associates all buy and sell execution reports to the tape print.

Value for this field: **10 numeric characters.**

\*\*For symbols migrated to Pillar – populated with the Pillar TradeID (unbundled, unique identifier provided to both sides of the trade)

### RoutingInstruction

The RoutingInstruction field is used to further differentiate incoming order types. Per Reg NMS, the use of certain values in this field will prevent certain orders from being routed to an away market center.

| Type    | RoutingInstruction |
|---------|--------------------|
| NX      | "7"                |
| DNS     | "D"                |
| SOC     | "S"                |
| ISO     | "I"                |
| CO      | "C"                |
| RPI     | "R"                |
| RTO     | "1"                |
| RTNR    | "2"                |
| RTR     | "3"                |
| ALO     | "A"                |
| ALO ISO | "L"                |

- NX : AutoExecution
- ISO : Inter-Market Sweep – An ISO order is a limit order that is designated to be executed exclusively at one Market Center even when other Market Centers are publishing better quotes.
- DNS : Do Not Ship – A DNS order is a limit order to buy or sell that is to be quoted and/or executed in whole or in part only by the NYSE and will be automatically cancelled if interest required to route to another market center.
- SOC : NMS IOC – A market or limited price order designated immediate or cancel that will be automatically executed against the displayed quotation up to its [the] full size and [will] sweep the Matching Engine, to the extent possible without being routed elsewhere for execution, and the portion not so executed will be immediately and automatically cancelled.

- CO : Closing Offset Order – A limit Day order that can only execute At the Close to offset a market imbalance. \*\*For symbols migrated to Pillar – not supported available for Tape A securities only
- RPI : Retail Price Improvement Order – Trade with Retail Taker orders only. \*\*For symbols migrated to Pillar – available beginning on a date announced via Trader Update
- RTO : Retail Order only – Interact with Retail Providing interest only. \*\*For symbols migrated to Pillar – available beginning on a date announced via Trader Update; Market not supported
- RTNR : Retail Non-Routable Order – Interact with Retail Providing Interest and/or other interest that resides on the limit order book. \*\*For symbols migrated to Pillar – not supported
- RTR : Retail Routable Order – Interact with Retail Providing interest, other interest that resides on the limit order book and/or can be routed away to other markets for execution. \*\*For symbols migrated to Pillar – not supported
- ALO : Add Liquidity Only Order – modifier that expresses intent to add liquidity only. Interest will automatically reprice to prevent taking liquidity.
- ALO ISO: Add Liquidity Only Inter-Market Sweep Order– modifier that indicates on arrival the order may trade through another market center even if the market is publishing a better quotation. Any remaining portion will then be placed on the Order book and will reprice when necessary in order to avoid taking liquidity.

#### ExecAwayMktID

This field contains the Market Center ID and Values for this field are:

A = NYSE American  
B = Nasdaq BX  
C = NYSE National  
D = FINRA ADF  
H = MIAX  
I = International Securities Exchange  
J = Direct Edge A (EDGA)  
K = Direct Edge X (EDGX)  
L = LTSE  
M = NYSE Chicago  
N = New York Stock Exchange  
P = NYSE Arca Exchange  
T = Nasdaq  
U = MEMX  
V = Investors' Exchange (IEX)  
W = Chicago Board Options Exchange  
X = Nasdaq PSX  
Y = BATS Y Exchange (BYX)  
Z = BATS Z Exchange

#### Liquidity/Billing Indicator

The BillingIndicator indicates the effect of an order on the liquidity of the book. Client's rates are determined by whether an order adds or removes liquidity from the book.

The values that clients can expect to receive in this field are:

1 = Taker

- 2 = Provider
- 3 = Blended
- 4 = Market on Close and Market Orders Executed in Close
- 5 = Opening/Provider
- 6 = Closing/Provider
- 7 = Limit on Close
- 8 = RLP - Retail Order Provider
- 9 = RLP - Retail Order Taker

BillingRate

BillingRate is sent on execution reports by NYSE that consolidates all billing information, including away market information, into a single field. This field combines current values of Billing Indicator and ExecAwayMktID into one field and supports additional NYSE Displayed Liquidity information. The billing values in support of the Midpoint Passive Liquidity order type (MPL) and Retail Firm program will only be returned in this field.

Examples:

- a. Field may contain an Away Market Indicator with optional MMID separated by “/”.
  - 1.1.1. Example format = D/EDGA.

Or

- b. Field may contain Billing Indicator with optional billing tier separated by a “/”.:
  - 1.1.2. Example format = 2/2 (represents a report for less than 2000 shares that provided liquidity)
  - 1.1.3. Example format = 11/3 (represents an MPL report for less than 5000 shares but greater than 1999 shares that provided liquidity)

In addition to the Billing Indicators listed above, the following additional values may be returned in this Tag:

- 10 = RLP - Retail Taker MPL \*\*For symbols migrated to Pillar – not supported
- 11 = Taker MPL
- 12 = Provider MPL
- 13 = RET – Retail Firm Provider
- 14 = RET – Retail Firm MPL Taker
- 15 = Closing Offset

Displayed Liquidity Table:

| Displayed Liquidity Categories                              | New Displayed Liquidity Indicator Values |
|---|--|
| 0 Round Lots  | "0"                                      |
| Greater than 0 and less than 1 round lot (1-99 shares)      | "1"                                      |
| From 1 to less than 20 round lots (100-1,999 shares)        | "2"                                      |
| From 20 to less than 50 round lots (2,000-4,999 shares)     | "3"                                      |
| From 50 to less than 100 round lots (5,000-9,999 shares)    | "4"                                      |
| From 100 to less than 200 round lots (10,000-19,999 shares) | "5"                                      |
| From 200 round lots and up (20,000 shares or more)          | "6"                                      |
| Reserved for future use.                                    | "7" – "9"                                |

\*\*For symbols migrated to Pillar – the billing indicator portion of the BillingRate field will continue to be populated. However, the second part, DisplayedLiquidityIndicator, will not be populated, except for non-displayed executions, which will receive "/0"

## StatusIndicators

Each bit position of the Status Indicator field will be used as a flag to indicate that zero is a valid value for an assigned field (supports 32 flag indicators).

| Bit Position | Indicator Name           | Description  | Bit Value                                |
|--------------|--------------------------|--|--|
| 0            | Zero Offset Price        | Represents Zero Offset Price Flag. When Offset Price equals zero, this Bit must equal 1.               | 1 = Zero Offset Price<br>0 = NULL        |
| 1            | Zero Minimum Trade Size  | Represents Zero Minimum Trade Size flag. When Minimum Trade Size equals zero, this Bit must equal 1.   | 1 = Zero Minimum Trade Size<br>0 = NULL  |
| 2            | Zero Minimum Trigger Vol | Represents Zero Minimum Trigger Vol flag. When Minimum Trigger Qty equals zero, this Bit must equal 1. | 1 = Zero Minimum Trigger Vol<br>0 = NULL |

## Appendix B: Reject Codes

### Session Rejects

| Reject Number | Name                          | Description  |
|---------------|-------------------------------|--|
| 0             | Success                       | No Reject  |
| 1             | System unavailable            | The Trading System is not available.   |
| 2             | Invalid Sequence Number       | The Last Sequence Number in a Logon message is larger than UTPDirect expected.   |
| 3             | Client Session Already Exists | A user attempted to login more than once and the existing client session is still active. Only one client session is supported per user. |
| 4             | Client Session Disabled       | The user attempted to reconnect to a client session that has been disabled.  |
| 5             | Connection Type               | The configured connection type of a session does not match the port the client connects to.  |

### Application Rejects

| Reject Reason Number | Name                                      | Description   |
|----------------------|---|---|
| 0000                 | Too Late to Cancel                        | For additional details, please refer to the Text field.                             |
| 0001                 | Unknown Order / Invalid Data              | For additional details, please refer to the Text field.                             |
| 0003                 | Unknown Order / Invalid Data              | For additional details, please refer to the Text field.                             |
| 0097                 | Firm Mnemonic Blocked                     | For additional details, please refer to the Text field.                             |
| 0098                 | Clearing Firm Mnemonic Blocked            | For additional details, please refer to the Text field.                             |
|                      |   |   |
| 3000                 | REJ - Invalid value in "Field Name"       | Invalid field in the incoming message   |
| 3001                 | REJ - Required field missing-"Field Name" | Required field is missing in the incoming message                                   |
| 3002                 | REJ - CancelQty and LeavesQty required    | Both these field must be present in a cancel request.                               |
| 3003                 | REJ - Target System Unavailable           | NYSE Trading System(s) unavailable.   |
| 3004                 | REJ - Invalid Stock Symbol                | Symbol is not a valid NYSE Symbol   |
|                      |   |   |
| 4000                 | REJ - Target System Unavailable           | Either the NYSE trading System is not available or the Stock has been is inhibited. |

| Reject Reason Number | Name                                     | Description   |
|----------------------|--|---|
| 4001                 | REJ - Invalid Stock Symbol               | Invalid stock symbol is provided in the incoming message  |
| 4002                 | REJ - Invalid Firm Mnemonic              | Invalid firm mnemonic is provided in the incoming message.  |
| 4003                 | REJ-Invalid Firm Mnemonic for Connection | Firm validation failed. Invalid firm mnemonic is provided in the incoming message.  |
| 4004                 | REJ - Market Closed                      | Market is closed.   |
| 4005                 | REJ - Booth Routing Not Supported        | Routing to the Broker Systems not currently available.  |
| 4006                 | REJ - Invalid value in "Field Name"      | Client Order ID format error  |
| 4007                 | REJ - Invalid Branch Code                | Invalid branch code is provided in the incoming message   |
| 4008                 | REJ - Reserved Branch Code used          | Reserved branch code is used in the incoming message  |
| 4009                 | REJ - Invalid Order Quantity             | Order quantity entered exceeds current maximum order quantity validation.   |
| 4010                 | REJ - Invalid MaxFloorQuantity           | MaxFloor quantity must be one of the following:<br>a. equal to zero (0),<br>b. equal to the quantity of the order or<br>c. in multiples of the symbols round lot parameter. |
| 4011                 | REJ-MaxFloor NA with RoutingInstruction  | DOT Reserve order must have RoutingInstruction designation of either NX (7) or DNS (D).   |
| 4012                 | REJ - Invalid Price                      | Incorrect price specified in the incoming message   |
| 4013                 | REJ – OPG TIF not valid for NASDAQ UTP   | Opening orders not valid for Nasdaq symbols as there is no opening auction.   |
| 4014                 | REJ - Invalid OrderCapacity              | Incorrect account type provided on an order.  |
| 4015                 | REJ - Missing Clearing Firm              | Clearing Firm not provided.   |
| 4016                 | REJ - Clearing Firm Not Found            | Clearing Firm not found in Firm database.   |
| 4017                 | REJ - Invalid Clearing Firm              | Clearing Firm not valid for entering firm mnemonic.   |
| 4018                 | REJ – CO Order not valid for NASDAQ UTP  | Closing orders not valid for Nasdaq symbols as there is no closing auction.   |
| 4019                 | REJ–Limit on Close must have TIF of Day  | OPG and IOC values for Time in Force are not applicable with a Limit on Close order.  |
| 4020                 | REJ– Invalid Execlnst for Limit on Close | DNI and DNR instructions are not applicable with a Time in Force of Day.  |
| 4021                 | REJ–Market on Close must have TIF of Day | OPG and IOC values for Time in Force are not applicable with a Market on Close order.   |
| 4022                 | REJ – ISO not valid for eQuotes          | Intermarket Sweep routing instruction not valid for eQuotes.  |

| Reject Reason Number | Name  | Description  |
|----------------------|---|--|
| 4023                 | REJ - Order Type not valid with SOC           | SOC order must be either a Market or a Limit order.                                |
| 4024                 | REJ - Time in force not valid with SOC        | SOC order must have a Time in Force of Day or OC.                                  |
| 4025                 | REJ - Order Type not valid with ISO           | ISO order must be a Limit order.   |
| 4026                 | REJ - Time in force not valid with ISO        | ISO order must have a Time in Force of Day or OC.                                  |
| 4027                 | REJ - Order Type not valid with DNS           | DNS order must be a Limit order.   |
| 4028                 | REJ - Time in force not valid with DNS        | DNS order must have a Time in Force of Day.  |
| 4029                 | REJ - Order Type not valid for DOT Reserve    | DOT Reserve order must be a Limit order.   |
| 4030                 | REJ - Time in force not valid for DOT Reserve | DOT Reserve order must have a Time in Force of Day or OC.                          |
| 4031                 | REJ-Invalid DOT Reserve Indicator Value       | Value must be either "Y" (Yes) or "N" (No) indicating a DOT Reserve order.         |
| 4032                 | REJ - Invalid Order type for NASDAQ UTP       | Order type not valid for Nasdaq securities.  |
| 4033                 | REJ - Day orders only for Test Symbols        | When using production test symbols, Time in Force on the order must be set as Day. |
| 4034                 | REJ -Target Sys Unavailable for Test Symbols  | Host systems are unavailable for test symbols.                                     |
| 4035                 | REJ - Feature Unavailable                     | This feature is currently unavailable.   |
| 4036                 | REJ-Invalid RT Mnemonic                       | The mnemonic must be registered as a valid Retail Taker.                           |
| 4037                 | REJ - Invalid MinQty value                    | Invalid Minimum Trade Size Quantity<br>Valid for UTP only.                         |
| 4038                 | REJ - Invalid Symbol for Test Mnemonic        | Only Test Symbols can be used when entering interest using a Test Mnemonic.        |

## Appendix C: OrderCapacity

| Field         | Values   |  |   |   |   |   |  |   |   |  |   |   |
|---------------|--|--|---|---|---|---|--|---|---|--|---|---|
| OrderCapacity | <p>Represents the Account Type, which reflects the type of trade as well as the relationship between the beneficial owner of the account and the member organization clearing the trade.</p> <p>Valid Values:</p>  |  |   |   |   |   |  |   |   |  |   |   |
|               | <table border="0"> <tr> <td data-bbox="591 531 630 604">A</td> <td data-bbox="634 531 678 604">=</td> <td data-bbox="683 531 1435 604">Trading by a member or member organization acting as agent on behalf of an unaffiliated customer.</td> </tr> <tr> <td data-bbox="591 646 630 720">P</td> <td data-bbox="634 646 678 720">=</td> <td data-bbox="683 646 1435 720">Trading for the proprietary account of a member or member organization or an affiliate of a member or member organization.</td> </tr> <tr> <td data-bbox="591 762 630 898">Q</td> <td data-bbox="634 762 678 898">=</td> <td data-bbox="683 762 1435 898">Trading by a member on the Floor relating to the covering or liquidating a member's own error. ## Appendix E: NYSE Pillar Reason Codes

### New Reason Codes Returned as Text on Outgoing Messages

Pillar will return a new set of event reason codes and descriptions as text on Execution Reports and Cancel Reject messages. These codes qualify the event that produced the message.

Format: Text = 'Rxxx: Description'

| Reason Code | Description              | Reason Code | Description                     |
|-------------|--------------------------|-------------|---------------------------------|
| R000        | OK                       | R022        | Invalid TimeInForce             |
| R001        | Invalid SenderCompID     | R023        | Invalid Settlement Type         |
| R002        | Invalid SenderSubID      | R024        | Invalid FutSettDate             |
| R003        | Invalid SendingTime      | R025        | Invalid Symbolsfx               |
| R004        | Invalid TargetCompID     | R026        | Invalid Open/Close              |
| R005        | Invalid TargetSubID      | R027        | Invalid StopPx                  |
| R006        | Invalid OnBehalfOfCompID | R028        | Invalid Client ID               |
| R007        | Invalid OnBehalfOfSubID  | R029        | Invalid MinQty                  |
| R008        | Invalid DeliverToCompID  | R030        | Invalid MaxFloor                |
| R009        | Invalid DeliverToSubID   | R031        | Invalid LocateReqd              |
| R010        | Invalid Account          | R032        | Invalid ExpireTime              |
| R011        | Invalid ClOrdID          | R033        | Invalid SecurityType            |
| R012        | Invalid Execlnst         | R034        | Invalid MaturityMonthYear       |
| R013        | Invalid IDSource         | R035        | Invalid PutOrCall               |
| R014        | Invalid OrderQty         | R036        | Invalid StrikePrice             |
| R015        | Invalid OrdType          | R037        | Invalid Covered/Uncovered       |
| R016        | Invalid Price            | R038        | Invalid Customer/Firm/Broker/MM |
| R017        | Invalid Order Capacity   | R039        | Invalid MaturityDay             |
| R018        | Invalid Security ID      | R040        | Invalid PegDifference           |
| R019        | Invalid Side             | R041        | Invalid SellersDays             |
| R020        | Invalid Symbol           | R042        | Invalid TradingSessionID        |
| R021        | Invalid Text             | R043        | Invalid NoTradingSessions       |

| Reason Code | Description                     | Reason Code | Description                      |
|-------------|---------------------------------|-------------|----------------------------------|
| R044        | Invalid DiscretionInst          | R077        | System full (MENG_RATE_EXCEEDED) |
